

LTE Update – Interop Las Vegas 2012

Wednesday, May 9, 2012, 3:15-4:15.

There is little doubt that LTE now constitutes the basis of essentially all carrier 3G/4G deployments going forward, and it's therefore vital that enterprise network planners and operations staff understand the capabilities, properties, and operational ramifications of this vital technology. This session will look at both current LTE technology and standards, as well as the state of contemporary deployments, and explore the next step in LTE's evolution, LTE Advanced.
