On November 27, 2017 Recon Analytics convened a panel of esteemed legal, policy and regulatory experts to discuss the Federal Communications Commission's (FCC) Restoring Internet Freedom Order. The discussion focused on the investment and innovation implications of the FCC treating broadband as a Title I information service; how proponents of Title II may react and the arguments they may raise on appeal; and how all of this will work to either attract or repel additional investment in the sector for years to come.

Speakers: Roger Entner of Recon Analytics, Peter Rysavy of Rysavy Research, Kathleen Abernathy of Wilkinson Barker Knauer, and Larry Downes.
