

## ***Communications Infrastructure & Telecom Services***

We are really excited to announced we will be hosting a call today, April 8<sup>th</sup>, with Peter Rysavy—founder of Rysavy Research. The focus of our discussion will center around 5G both from the short-term (and the impact on timeline from COVID crisis) and long-term perspective. For those of you who do not know Peter—we promise you he is one of the smartest minds in wireless. Some examples of his impressive work may be seen at <https://rysavy.com/>.

We promise you it will be time very well spent.

We hope you can join us!

~ Jennifer Fritzsche, Senior Analyst, and Team

Topics we plan to address during the call are the following:

- New Release 16 schedule (and impact for 5G rollout)
- Release 15 versus Release 16 capabilities
- Spectrum considerations: CBRS, C-band, 6 GHz, mmWave
- Non standalone (5G radio and LTE core) versus standalone (5G core and 5G radio): why this matters
- Thoughts around Integrated Access Backhaul (IAB) and the role it plays in 5G: game changer or just one more tool?
- Fiber deployment as critical part of 5G architecture
- Edge computing
- Virtualization and SDN

**This call would be relevant for anyone caring on the telecom services and communications infrastructure space.**
